

Site Audit: Detailed Issue: Issues with incorrect hreflang links

drantipov.com

Issues with incorrect hreflang links

Project name: drantipov.com

Detailed Issue Description

About this issue:

A hreflang (rel="alternate" hreflang="x") attribute helps search engines understand which page should be shown to visitors based on their location. Utilizing this attribute is necessary if you're running a multilingual website and would like to help users from other countries find your content in the language that is most appropriate for them.

It is very important to make sure your hreflang links always refer to absolute URLs with HTTP 200 status codes, otherwise search engines will not be able to interpret them correctly and, as a result, will not show the correct language version of your pages to the relevant audience.

For more information, please see these articles: [Tell Google about localized versions of your page](#), [How to Do International SEO with Semrush](#) and [Hreflang Attribute 101](#)

How to fix:

To avoid any problems with hreflang links, we recommend that you review your hreflang attributes and do the following:

- Fix broken hreflang URLs
- Fix hreflang redirects
- Replace relative URLs with absolute ones
